EDUCATION

New York University

Master in Quantitative Economics

- **Courses:** Stochastic Calculus and Asset Pricing, Financial Computing (C++), Machine Learning

New York, U.S.A.

Sep 2025 – Dec 2026

Central University of Finance and Economics

Master of Mathematics and Economics

- **Honors:** Academic Scholarships, Best Graduation Thesis
- **Courses:** Advanced Econometrics, Advanced Financial Theory, Optimization Theory

Beijing, China

Sep 2021 – Jun 2024

WORK EXPERIENCE

QED Trading

Quantitative Research Associate Intern

- Owned engineering improvements to quantitative research pipelines, fixing asset-history and missing-data handling, updating strategy configurations, and expanding tests for reliable backtests.
- Developed modular Python components for a daily crypto ML signal framework, integrating boosting models, cross-asset features, diagnostics, and signal-accuracy evaluation.
- Established an AI-assisted development workflow for research engineering, using structured prompts, iterative code review, failure-mode analysis, and test refinement to ship maintainable changes.

Florida, U.S.A.

May 2026 – Present

Kronos Research

Quantitative Researcher Intern

- Researched and validated alpha signals in prediction markets, combining market microstructure analysis with systematic performance diagnostics.
- Developed a high-frequency trading system in Rust/Python, supporting data recording, replay, backtesting, and paper/live trading.
- Integrated on-chain and alternative data pipelines to enhance signal generation and risk monitoring.

Remote

Dec 2025 – Feb 2026

Algobeats

Quantitative Researcher (Full-time)

- Modeled and priced Polymarket products using binary-option pricing frameworks; developed and monitored trading strategies based on valuation and risk signals.
- Built a systematic signal-testing and strategy-research framework on the firm's high-frequency trading system, supporting tick-level analysis and execution diagnostics.
- Contributed to backtesting and paper-trading frameworks for medium-frequency cross-sectional and time-series strategies, enabling iterative strategy validation.

Chengdu, China

May 2024 – Aug 2025

Renmin University of China

Research Assistant

- Led literature review on blockchain and data factor markets, synthesizing macroeconomic and mechanism-design models for research stakeholders.
- Proposed a Bayesian game framework to analyze data-property-right allocation and evaluate welfare effects under heterogeneous growth assumptions.

Beijing, China

Jul 2023 – Mar 2024

HONORS AND AWARDS

Best Graduation Thesis Award

Issued by *Central University of Finance and Economics*

- “Verifier’s Dilemma”: Applied game-theoretic model to analyze validator incentive structures in blockchain layer-2 scaling solutions.

Beijing, China

May 2024

Outstanding Paper at the Conference of Evolutionary Game Theory and AI

Issued by *Beihang University*

- Presented research on the “Public Welfare Analysis Based on Multiplied Dictator Game and Ultimatum Game”.

Beijing, China

Jul 2023

SKILLS, LANGUAGES, INTERESTS

- **Languages:** Chinese (Native), English (GRE 328), Japanese (Jtest 698)
- **Technical Skills:** Python, C++, SQL, R, AWS, Docker, Git, LLM-assisted Development
- **Interests:** Swimming, Reading Non-fiction, Jazz Music
